

**1st Resolution of the 4th Global Energy Parliament
“Sustainable Economics”**

Acknowledging that economic instability and economic unsustainability are due to some specific factors, including:

- a. Rapidly changing value of currencies or exchange rates;
- b. The hoarding of gold, currency and goods rather than their transaction;
- c. The easy reproducibility of currency, causing a surge in counterfeit money production;

Further convinced that:

- a. Gold is an internationally understood measure of wealth;
- b. Gold is a good conductor and supports the flow of positive energy in the human system;

The GEP unanimously recommends that:

- a. All nations of the world share one universal unit of currency based on gold;
- b. Global market agree on a standard, fixed value of gold, without fluctuation;
and
- c. Gold be used in the ink of the universal currency notes making the value of the note the same as the value of the gold used.
